Executive Summary

The peptide and longevity market is experiencing an unprecedented inflection point. Driven by the mainstreaming of GLP-1 receptor agonists (projected to reach 25 million US patients by 2030) and surging consumer interest in healthspan extension, the global peptide therapeutics market is expanding at a 7-13% CAGR toward a \$160B+ valuation.

For Noho Labs and Aluna Science, this presents a massive opportunity — provided you navigate the complex regulatory and advertising landscape correctly. Meta's November 2025 health advertising restrictions and the FDA's ongoing evaluation of Category 1 and 2

compounding substances have created a high-friction environment that favors sophisticated, compliant operators over “wild west” research chemical vendors.

This report synthesizes data across market sizing, 29 competitor profiles, Similarweb traffic analytics, Meta Ad Library quantitative analysis, creative teardowns, funnel architecture, audience psychographics, regulatory compliance, and influencer ecosystem mapping to deliver a comprehensive 90-day launch roadmap.

The core recommendation: Leverage your dual-brand architecture. Use **Aluna Science** (supplements) for low-friction, high-volume customer acquisition via influencer whitelisting, and use **Noho Labs** (telehealth/Rx) to capture high-LTV patients seeking physician-supervised, premium peptide protocols. Acquire customers cheaply through Aluna, then cross-sell into Noho Labs for higher-tier interventions.

1. Market Sizing & Growth Trajectory

The peptide market is doubling every 7-8 years, with North America representing approximately 62% of global demand. While GLP-1s dominate headlines and revenue, they are serving as an “on-ramp” that normalizes peptide therapy for the broader population.

Global Peptide Therapeutics Market

Year	Market Size (Range)	Source
2024	45.3 <i>B</i> – 54.6 <i>B</i>	Multiple sources
2025	52.6 <i>B</i> – 140.9 <i>B</i>	Precedence / Grand View Research
2026	54.6 <i>B</i> – 164.0 <i>B</i>	Multiple sources
2033	85.4 <i>B</i> – 294.6 <i>B</i>	Multiple sources
CAGR	6.8% - 12.9%	Range across sources

Key Sub-Markets

Segment	2025 Size	Projected Size	CAGR	Notes
GLP-1 Receptor Agonists	\$66.4B	185–268B (2030-2033)	12.4-30.6%	Dominant growth driver
NAD+ Supplements	\$3.5B	\$12.2B (2033)	13%	Accessible entry point
Peptide Cosmetics	\$2.62B	\$8.28B (2035)	12.3%	Growing rapidly
US Peptide Therapeutics	\$103.66B	\$336.12B (2033)	—	Largest single market

Google Trends Data (US, 5-Year Trajectory)

Search Term	5-Year Avg. Interest	Current Trend	Key Insight
NAD	45/100	Peaked at 100 in late 2024, now 60-80	Mainstream awareness achieved
Glutathione	22/100	Steady at 20-25	Stable, growing slowly
Sermorelin	6/100	Spiked around FDA discussions	Under-served demand
BPC-157	4/100	Slight uptick to 3-5 in 2024-2025	Dedicated niche audience
Peptide therapy	2/100	Near-zero in 2021 → 4-6 in 2025-2026	Fastest % growth rate

Breakout Search Queries (>5,000% Growth)

The fastest-growing related queries are specific peptide names — GHK-Cu, Semaglutide, Tirzepatide, Retatrutide, Tesamorelin, MOTS-C, and KPV — indicating that consumers are moving past general curiosity and researching specific compounds and protocols.

Consumer Demand Signals (April 2025 - April 2026)

“Cost of peptide therapy” searches grew 300%, “Peptides” grew 80%, and “What is peptides” grew 70%. The market is transitioning from early adopters to early majority.

Top US States for “Peptide Therapy” Interest

Wyoming, Nebraska, Arizona, Idaho, and Colorado index highest. These states also tend to have more permissive telehealth regulations.

2. Competitor Digital Footprint & Traffic Analysis

Based on Similarweb data (December 2025 - May 2026), the competitive landscape is highly stratified into four distinct tiers.

Complete Traffic Analysis Table

Domain	Avg Monthly Visits	Global Rank	Bounce Rate	Top Traffic Source	Paid Search %
hims.com	7,753,827	#4,601	58.1%	Direct (46.5%)	14.7%
ro.co	7,331,455	#4,785	44.3%	Direct (48.8%)	20.2%
kindpatches.com	2,275,661	#26,433	43.7%	Direct (49.2%)	16.6%
cymbiotika.com	925,690	#57,650	54.3%	Direct (48.3%)	10.2%
peptidesciences.com	608,185	#824,620	52.1%	Direct (49.5%)	1.1%
agelessrx.com	525,413	#68,842	36.3%	Direct (52.5%)	22.1%

Domain	Avg Monthly Visits	Global Rank	Bounce Rate	Top Traffic Source	Paid Search %
paradigmpeptides.com	6,062	#5,873,457	59.7%	Organic (51.7%)	0.0%
noholabs.com	2,966	#3,082,195	32.3%	Direct (78.9%)	0.0%
alunascience.com	0	N/A	N/A	N/A	N/A

Traffic Tier Analysis

Tier 1 (>1M visits/month): Hims, Ro, and Kind Patches dominate through massive paid media budgets and brand awareness. These are not your direct competitors — they are market-makers whose spending educates consumers about peptides and telehealth.

Tier 2 (100K-1M visits/month): Cymbiotika, Peptide Sciences, AgelessRx, Swiss Chems, and Rho Nutrition represent your direct, scaled competitors. They have proven product-market fit and established advertising operations.

Tier 3 (10K-100K visits/month): OpenLoop Health, Defy Medical, Magnali, and Evolve Telemed are mid-stage competitors with growing operations.

Tier 4 (<10K visits/month): Noho Labs currently sits here with approximately 3,000 monthly visits, almost entirely from direct traffic (78.9%), indicating strong brand awareness among a small existing audience but no paid acquisition engine.

Key Insight: Rho Nutrition's Traffic Mix

Rho Nutrition's 10.3% social traffic share is the highest among supplement competitors, validating their influencer-heavy strategy. Their 16.2% paid search and relatively low organic (14.6%) suggest they are heavily reliant on paid channels — meaning their growth is directly correlated to ad spend, not SEO moats.

3. Competitor Universe & Pricing Intelligence

A comprehensive analysis of 29 competitors across five categories reveals distinct market segments with different pricing strategies, target audiences, and competitive dynamics.

Market Segmentation

Category	Key Players	Price Range	Business Model
Supplement DTC	Rho Nutrition, Cymbiotika, Kind Patches, Magnali, The Pause Life	15–500	Subscription + one-time
Telehealth	Hims, Ro, AgelessRx, Defy Medical, Evolve Telemed	80–1,899	Membership + Rx
Research Suppliers	Peptide Sciences, Swiss Chems, Limitless Life, Core Peptides	20–370	One-time purchase
Compounding Pharmacies	Empower, Olympia, Tailor Made, Hallandale	0.50–899	Provider-prescribed
Beauty/Device	Seranova Beauty	36–229	One-time + subscription

Detailed Competitor Profiles (Top 10)

1. Rho Nutrition — rhonutrition.com

- **Category:** Supplement DTC
- **Revenue:** Estimated 1.6M–5M annually
- **Products:** Liposomal NAD+ (55.95), *Glutathione*(52.95), Curcumin + Resveratrol (39.95), *CollagenPeptides*(45.99), Elite Performance Stack (\$175.32)
- **Price Range:** 39.95–335.59
- **Differentiator:** Doctor-formulated liposomal delivery system for superior absorption
- **Social Proof:** 500,000+ customers, 20K+ 5-star reviews
- **Model:** Subscription (save 10-25%) + one-time purchase

2. Cymbiotika — cymbiotika.com

- **Category:** Supplement DTC
- **Revenue:** 150M + annually; raised 25M seed + \$30M debt
- **Products:** Liposomal NAD+ (77), *Shilajit*(66), Irish Sea Moss (65), *LiquidColostrum*(88), Magnesium (\$68)

- **Price Range:** 22.40–88.00
- **Differentiator:** Clean, science-backed supplements with advanced liposomal delivery; retail distribution (Ulta, Target)
- **Social Proof:** 60K+ subscribers, 6,400+ reviews on Glutathione alone

3. Hims — hims.com

- **Category:** Telehealth (GLP-1/Weight Loss focus)
- **Revenue:** \$2.35B in 2025
- **Products:** Wegovy Pill (149), *Ozempic Pill* (149), Wegovy Pen (199), *Zepbound Vial* (299)
- **Price Range:** 149–1,899
- **Differentiator:** Accessible, personalized telehealth with transparent subscription pricing
- **Social Proof:** 2.6M subscribers, 8,557 Trustpilot reviews

4. Ro — ro.co

- **Category:** Telehealth
- **Revenue:** 598M *Annualized* (2024); *valued at* 7.0B; \$1.0B total funding
- **Products:** Wegovy pill (149), *Foundayopill* (149), Zepbound KwikPen (\$299)
- **Price Range:** 149–1,100
- **Differentiator:** Vertically integrated platform with insurance concierge and direct-to-door pharmacy

5. AgelessRx — agelessrx.com

- **Category:** Telehealth (Longevity)
- **Products:** Wegovy (199), *Zepbound* (349), NAD+ Nasal Spray (125), *NAD + Injections* (235), LDN (\$175)
- **Price Range:** 125–499
- **Differentiator:** 100% online longevity telehealth with science-backed protocols
- **Social Proof:** 200K+ community, 5,200+ clinical study participants

6. Kind Patches — kindpatches.com

- **Category:** Supplement DTC
- **Revenue:** Estimated 5.6M–10.1M monthly

- **Products:** All patches priced at \$15 (Berberine, NAD+, Mood+, Dream, Unpuff)
- **Differentiator:** Transdermal delivery patches; convenience-first positioning
- **Social Proof:** 4M+ customers, 17,522+ Trustpilot reviews

7. Defy Medical — defymedical.com

- **Category:** Telehealth
- **Revenue:** \$6.2M annually
- **Products:** TRT (129–199/mo), BHRT (150–200/mo), Semaglutide (80–350), Peptides (200–500/mo)
- **Differentiator:** Lab-first, physician-led approach without subscriptions or contracts
- **Social Proof:** 3,805 Trustpilot reviews (4.9 stars)

8. Peptide Sciences — peptidesciences.com

- **Category:** Research Supplier
- **Revenue:** Grew from 8.7M (2020) to 105.4M (2024); acquired in \$320M LBO
- **Products:** BPC-157 5mg (59.50), TB – 5005mg (85), PT-141 10mg (55), NAD + 750mg (300)
- **Differentiator:** USA-manufactured, 99%+ purity, same-day shipping

9. Empower Pharmacy — empowerpharmacy.com

- **Category:** Compounding Pharmacy (503A + 503B)
- **Revenue:** Estimated 400M annually; 50M total funding
- **Products:** Tirzepatide (150–561), NAD+ Injection, Glutathione Injection, Sermorelin
- **Differentiator:** Nation's largest compounding pharmacy; fills 15,000 prescriptions daily

10. Evolve Telemed — evolvetelemed.com

- **Category:** Telehealth
- **Products:** Compounded Semaglutide (400–600), Tirzepatide (900–1,200)
- **Model:** Annual membership (349/year) + labs (149.99) + monthly medications
- **Differentiator:** Concierge-level telemedicine with BHRT and peptide focus

Pricing Intelligence Summary

Product	Lowest Price	Highest Price	Average	Noho Labs Opportunity
NAD+ (oral/liposomal)	\$15 (Kind Patches)	\$77 (Cymbiotika)	50—60	Price at 55—65 (premium positioning)
NAD+ (injectable)	\$125 (AgelessRx)	\$300 (Peptide Sciences)	200—235	Price at 175—225 (competitive)
Glutathione (oral)	\$39.95 (Rho)	\$66 (Cymbiotika)	50—55	Price at 50—60
Sermorelin (Rx)	\$199 (Olympia)	\$500+ (Defy)	250—350	Price at 275—350
BPC-157 (research)	\$52 (Core Peptides)	\$97 (Core Peptides)	60—85	N/A until reclassified
GLP-1 (compounded)	\$149 (Hims/Ro)	\$1,200 (Evolve)	300—500	Price at 249—399

4. Meta Ads Quantitative Deep Analysis

An exhaustive review of the Meta Ad Library reveals distinct advertising strategies and spend levels across the peptide and longevity category. The data below was collected on June 16, 2026.

Category-Level Ad Volume

Search Term	Active US Ads	Key Advertisers	Competition Level
GLP-1 / weight loss	42,000	Hims, Ro, telehealth startups	Extremely High
NAD+ / NAD supplement	42,000	Rho, Cymbiotika, Kind Patches, dozens of DTC brands	Very High
Glutathione	8,000	Rho, Cymbiotika, supplement brands	High
Peptide therapy	5,600	Local clinics, AgelessRx, small telehealth	Medium (Opportunity)
Sermorelin	2,600	3-4 advertisers, mostly age-gated	Low (Major Opportunity)
BPC-157	1,800	Research suppliers, few legitimate brands	Very Low (Major Opportunity)

Top Advertiser Deep Dives

Rho Nutrition: The Playbook to Study (~910 Active Ads)

Rho Nutrition is the most sophisticated advertiser in the premium longevity supplement space. Their strategy relies on massive creative volume and influencer whitelisting at scale.

Metric	Data
Total active ads	910
Advertiser pages used	10+ (whitelisting)
Earliest active ad	Feb 13, 2026 (bulk launch)
Most recent ads	May 22, 2026
Estimated monthly spend	150K – 400K
Primary format	Video UGC (50%)
Hero product	Liposomal NAD+
Key offer	“Up to 25% Off First Order”

Their whitelisting partners include Dr. Mark Hyman, Mind Pump, Lauren Fisher, Michael Chernow, Laird Hamilton, Eric Hinman, Dr. Jeremy London, and Dr. Francesca LeBlanc. Each partner page runs multiple ad variations featuring their authentic voice and personal endorsement.

Cymbiotika (~680 Active Ads)

Cymbiotika combines premium DTC subscription models with retail distribution. They utilize influencer whitelisting (Gary Brecka, Remi Cruz, joyjah) and leverage massive social proof (“100+ Million Packets Sold,” “50,000+ Reviews”). Their estimated monthly spend is 150K – 300K, with a bulk launch in April-May 2026.

AgelessRx (~93 Active Ads)

As a telehealth provider prescribing actual medications, AgelessRx faces stricter Meta compliance. Nearly all their ads are age-gated, which limits reach but ensures compliance. They use multiple advertiser pages (AgelessRx, The Journey Is The Destination, trueself, Popdust, AgelessRx Aesthetics & Academy). Estimated spend: 30K – 75K/month.

Kind Patches (~500+ Active Ads)

Transdermal NAD+ delivery patches with heavy social proof (“millions sold”) and a convenience angle. Lower price point (15)*createsanaccessibleentrypoint.Estimatedspend :* 100K-\$200K/month.

Spend Estimates Across the Category

Advertiser	Estimated Monthly Spend	Confidence Level
Hims (weight loss only)	5M – 15M	Medium
Ro (weight loss only)	3M – 8M	Medium
Rho Nutrition	150K – 400K	Medium-High
Cymbiotika	150K – 300K	Medium
Kind Patches	100K – 200K	Medium
AgelessRx	30K – 75K	Low-Medium
All sermorelin advertisers (combined)	20K – 50K	Low
All BPC-157 advertisers (combined)	10K – 30K	Low

Ad Format Distribution (Observed Across Top Performers)

Format	Share	Best Use Case
UGC Video (doctor/expert testimonial)	60-70%	Top-of-funnel awareness, trust building
Static product education	15-20%	Retargeting, product-specific messaging
Bundle/stack promotion	10-15%	Driving AOV, existing audience
Carousel (multi-product)	5-10%	Product discovery, collections

Ad Longevity Patterns

Rho Nutrition bulk-launched their current campaign on February 13, 2026, suggesting a major creative reset. Ads running 4+ months are proven winners that have passed their testing phase. Most supplement brands refresh creative every 30-60 days, while telehealth brands cycle faster (2-4 weeks) due to compliance pressure.

5. Creative & Messaging Teardowns

Winning creatives in this space rely heavily on User-Generated Content (UGC) from credible experts — specifically doctors or high-performance athletes. The following analysis is based on direct observation of active ads in the Meta Ad Library.

Hook Formulas That Work

Category 1: Problem-Agitation Hooks

These hooks lead with a symptom or frustration the audience already feels:

Hook	Advertiser	Why It Works
“Most supplements don’t absorb well, which is why people don’t feel results.”	Rho/Mind Pump	Validates frustration, positions product as solution
“My brain fog completely vanished!”	Cymbiotika	Specific, relatable outcome
“I feel 10 years younger!”	Cymbiotika	Aspirational transformation
“I used to piece together supplements from different brands.”	Rho/Dr. London	Positions bundle as simplification

Category 2: Authority/Expert Hooks

Hook	Advertiser	Why It Works
“Why I Take Glutathione Every Day”	Rho/Dr. LeBlanc	Physician credibility, curiosity
“They call glutathione the master antioxidant for a reason.”	Cymbiotika/Gary Brecka	Expert validation, science framing
“Over the past decade, our team of PhD chemists developed a technology…”	Rho	R&D investment signals quality
“I’m picky with supplements, especially anything I take daily.”	Cymbiotika/joyjah	Relatable selectiveness

Category 3: Newsworthiness/Discovery Hooks

Hook	Advertiser	Why It Works
“JUST LAUNCHED: Liposomal Collagen Peptides”	Rho	Novelty, first-mover advantage
“Your next Ulta run just got a wellness upgrade.”	Cymbiotika	Retail credibility, accessibility
“Introducing The Total Rho Stack”	Rho	Product launch excitement

Category 4: Social Proof Hooks

Hook	Advertiser	Why It Works
“100+ Million Packets Sold”	Cymbiotika	Massive scale validation
“50,000+ Reviews”	Cymbiotika	Community trust
“500,000+ customers”	Rho	Market validation

Messaging Architecture Patterns

Pattern 1: “Science + Simplicity” (Rho Nutrition)

Structure: Complex science → Simple benefit → Social proof → CTA

“Our products are highly effective because of our Liposomal Delivery Technology. Over the past decade, our team of PhD chemists developed a technology that encapsulates active ingredients—like NAD+, Curcumin, and Glutathione—in microscopic protective membranes called liposomes designed to support absorption.”

This pattern establishes credibility through scientific language, then immediately translates it into a tangible benefit.

Pattern 2: “Routine Integration” (Influencer Whitelisting)

Structure: “I added X to my routine” → Specific use case → Felt difference → Recommendation

“I recently added Rho Nutrition to my daily routine. Every morning, I make a water infused cocktail with Rho Curcumin + Resveratrol, NAD+ and Glutathione. This is my Cellular Longevity Stack! The cool thing about Rho is that all their supplements use Liposomal Technology... I absolutely feel the difference!”

This pattern makes the product feel like a natural addition to an existing lifestyle, not a dramatic change.

Pattern 3: “Stack/Protocol” (Bundle Positioning)

Structure: Multiple products → Combined benefit → Savings → Bundle CTA

“Introducing The Total Rho Stack—featuring 10 essential products plus the Rho Serving Spoon, all pre-discounted at 20% off, saving you \$84! Fuel your body with the Total Rho Stack.”

This pattern drives AOV, positions the brand as a complete solution, and creates switching costs.

Compliance Language Framework

Compliant (DO Use)	Non-Compliant (DON'T Use)
“Designed to support...”	“Treats” or “Cures”
“Supports cellular health”	“Heals your cells”
“Clinically proven to reduce wrinkles 20% in 90 days” (with data)	“Eliminates wrinkles”
“Supports immune health, detox pathways”	“Boosts your immune system”
“Promotes energy metabolism”	“Gives you unlimited energy”
“Enhanced absorption”	“100% absorption guaranteed”
“60-day money-back guarantee”	“It will definitely work for you”
“Physician-supervised protocols”	“Get drugs without a prescription”

Video Ad Structure (Optimal 60-Second UGC)

Timestamp	Element	Purpose
0-3 seconds	Hook (face-to-camera, bold statement)	Stop the scroll
3-10 seconds	Problem identification or personal story	Create relatability
10-25 seconds	Product introduction + mechanism of action	Educate and differentiate
25-40 seconds	Personal results or benefits experienced	Build desire
40-60 seconds	CTA (discount code, link, urgency)	Drive action

Creative Volume Benchmarks

To compete at Rho’s level, you need 50-100 new creatives per month. The minimum viable output is 10-20 new creatives per month, with a testing cadence of 3-5 new hooks per week. The kill threshold is less than 1% CTR after \$50 spend — if an ad doesn’t hit that benchmark, move on immediately.

6. Funnel & Conversion Architecture

The fundamental tension in health advertising is the “**Friction Paradox.**” Supplement brands have low-friction funnels (3-4 clicks to purchase) resulting in higher conversion rates and lower CAC. Telehealth brands have high-friction funnels (quiz → consult → Rx) resulting in lower conversion rates and higher CAC, but significantly higher LTV.

Funnel Comparison Matrix

Brand	Funnel Type	Steps to Purchase	Avg. Time to Convert	Friction Level	Est. CVR
Rho Nutrition	Direct e-commerce	3-4 clicks	Minutes	Low	2.5-4%
Cymbiotika	Direct e-commerce	3-4 clicks	Minutes	Low	2-3%
Kind Patches	Direct e-commerce	2-3 clicks	Minutes	Very Low	3-5%
Hims	Telehealth + Rx	4-5 steps	Hours-Days	Medium	5-8% (quiz-to-sub)
AgelessRx	Telehealth + Rx	5-7 steps	Days	High	1-3%

Rho Nutrition Funnel Teardown (Best-in-Class Supplement)

Architecture: Meta Ad (UGC Video/Static) → Product/Collection Page → Add to Cart → Checkout → Subscription Upsell

Key Conversion Elements:

- 1. Bundle-first display (bundles shown before individual products to drive AOV)
- 2. Massive review counts (8,812 reviews on hero product)
- 3. Savings callouts (“SAVE \$19.48” on every bundle)
- 4. Star ratings visible (4.7-4.8 stars across all products)
- 5. Urgency badges (“BESTSELLER” / “NEW” / “SOLD OUT”)
- 6. Subscription option with additional savings
- 7. Free shipping threshold at \$150+ (encourages bundle purchase)
- 8. FAQ section addressing objections (storage, testing, allergens)
- 9. Authority testimonials (Dr. Mark Hyman quote on collection page)
- 10. 60-day money-back guarantee

Estimated Metrics: AOV 100–150, subscription rate 30-40%, LTV 300–500.

Recommended Funnel Architecture for Aluna (Supplements)

Meta Ad (UGC/Influencer) → Product/Bundle Page → Add to Cart → Checkout →

Key optimization: Display bundles first to drive AOV. Ensure review counts and star ratings are highly visible. Offer subscription with 15-20% savings.

Recommended Funnel Architecture for Noho Labs (Telehealth)

Meta Ad (Education) → Symptom Quiz Landing Page → Personalized Protocol Recommendation

Key optimization: Use the quiz to personalize the experience and qualify the lead before introducing the friction of a medical consultation. Show the personalized protocol recommendation before asking for payment.

7. Audience Psychographics & Community Sentiment

Analysis of Reddit communities (r/Biohackers, r/Peptides, r/Supplements, r/Nootropics) and broader online discourse reveals five distinct psychographic segments that should inform creative strategy and targeting.

Audience Segments

Segment 1: The Performance Optimizer

- **Demographics:** 25-40, predominantly male, high income (\$100K+)
- **Behavior:** CrossFit athletes, competitive fitness enthusiasts; already self-injecting or willing to
- **Seeks:** Recovery, lean mass, injury healing
- **Key Peptides:** BPC-157, TB-500, Sermorelin, CJC-1295 + Ipamorelin
- **Pain Point:** "I'm always injured and recovery takes too long"
- **Community Quote:** "Sermorelin is the real deal. Strength is up, BF% is down, recovery is great. I would say most games level athletes are taking it."
- **Trust Signals:** Other athletes' experiences, clinical data, purity testing

Segment 2: The Longevity Seeker

- **Demographics:** 35-55, male/female, high income (\$150K+)
- **Behavior:** Cautious, prefers oral/topical over injections; subscription-friendly
- **Seeks:** Energy, cognitive clarity, skin health, disease prevention
- **Key Products:** NAD+, Glutathione, GHK-Cu, Epithalon
- **Pain Point:** “I want to age well and maintain my energy/cognition”
- **Community Quote:** “Lots of positive impacts including much reduced joint and back pain, better recovery from exercise”
- **Trust Signals:** Physician endorsements, peer-reviewed research, brand reputation

Segment 3: The Weight Loss Warrior

- **Demographics:** 30-55, female-skewing, middle-high income
- **Behavior:** Frustrated with traditional dieting; interested in GLP-1s but concerned about cost/access
- **Seeks:** Appetite control, metabolic support, body composition
- **Key Products:** Semaglutide, Tirzepatide, Berberine, Tesamorelin
- **Pain Point:** “Nothing else has worked, and brand-name GLP-1s are too expensive”
- **Community Quote:** “A few weeks into my NAD+ vial and I had all of my energy back. I will continue taking it as long as I’m on Tirzepatide.”
- **Trust Signals:** Before/after stories, doctor supervision, FDA context

Segment 4: The Chronic Condition Manager

- **Demographics:** 30-60, male/female, varied income
- **Behavior:** Has specific health conditions (autoimmune, gut issues, chronic pain); desperate for solutions
- **Seeks:** Targeted healing, inflammation reduction, gut repair
- **Key Peptides:** BPC-157, KPV, LL-37, Glutathione
- **Pain Point:** “Doctors haven’t been able to help me, I need to take this into my own hands”
- **Community Quote:** “I have lupus and it has changed my life. Immediate increase in energy, memory”
- **Trust Signals:** Other patients’ experiences, functional medicine doctors

Segment 5: The Curious Newcomer

- **Demographics:** 25-45, male/female, middle income
- **Behavior:** Heard about peptides through podcasts/social media; overwhelmed by options
- **Seeks:** Education, guidance, simple entry point
- **Key Products:** NAD+ (oral/patch), Glutathione, basic stacks
- **Pain Point:** “I keep hearing about peptides but I don’t know what’s legit”
- **Community Quote:** “Just recently began my research into NAD+ and the literature seems promising”
- **Trust Signals:** Educational content, clear explanations, trusted brand

Community-Validated Peptide “Stacks”

Stack Name	Components	Use Case	Community Sentiment
Wolverine Stack	BPC-157 + TB-500	Soft tissue repair, recovery	Very positive, widely recommended
GLOW Stack	BPC + TB + GHK-Cu	Skin, hair, healing	Positive, especially among women
KLOW Stack	GLOW + KPV	Above + gut/inflammation	Newer, growing interest
Classic GH Stack	CJC-1295 + Ipamorelin	GH support, recovery, fat loss	Well-established, trusted
Cellular Longevity	NAD+ + Glutathione + Curcumin	Anti-aging, energy, detox	Very positive (Rho’s positioning)
Weight Management	Semaglutide + NAD+	Fat loss + energy maintenance	Rapidly growing

Common Objections to Address in Advertising

Objection	Frequency	How to Address
“Is this legal?”	Very High	Compliance messaging, physician-supervised, FDA context
“Does it actually work?”	High	Clinical data, real testimonials, lab results
“Is it safe?”	High	Doctor oversight, pharmaceutical-grade sourcing
“How is this different from sketchy websites?”	High	Quality, third-party testing, medical supervision
“Can I afford this long-term?”	Medium	Subscription pricing, protocol optimization
“I don’t want to inject myself”	Medium	Alternative delivery methods (oral, topical, patches)

8. Regulatory & Compliance Landscape

Navigating the FDA and Meta policy environments is the highest barrier to entry, but also the strongest competitive moat for brands that get it right.

FDA Peptide Category System (Current as of June 2026)

Category	Status	Compounding Eligibility	Key Peptides
Category 1	Under evaluation, sufficient safety data	MAY be compounded by 503A pharmacies	Sermorelin, GHK-Cu (non-injectable), others
Category 2	Significant safety risks identified	CANNOT be compounded	BPC-157, TB-500, Epitalon, KPV, Semax, Selank, MOTS-C
Category 3	Insufficient documentation	CANNOT be compounded	Various

In late 2023, the FDA moved 19 widely used peptides to Category 2, effectively banning compounding pharmacies from preparing them. While HHS Secretary RFK Jr. stated in February 2026 his intention to move 14 of these back to Category 1, **no formal reclassification has occurred as of June 2026.**

The 14 Peptides Discussed for Potential Reclassification

AOD-9604, BPC-157, Emideltide (DSIP), Epitalon, GHK-Cu, Kisspeptin-10, KPV, MOTS-C, Semax, Selank, TB-500, Thymosin Alpha-1, and 2 additional TBD.

Critical distinction: Reclassification to Category 1 only allows compounding while under review — it does NOT constitute FDA approval for safety or efficacy.

Currently Legal for Advertising (Category 1 or Supplement)

Compound	Status	Advertising Implications
Sermorelin	Category 1 (legal to compound)	Safe to advertise as Rx; requires age-gating
NAD+	Legal as supplement AND compounded injectable	Supplement = no age-gate; Injectable = age-gated
Glutathione	Legal as supplement AND compounded	Same as NAD+
GHK-Cu	Category 1 (non-injectable routes only)	Topical/oral = supplement positioning possible
Semaglutide	Complex (FDA vs. compounders legal battle ongoing)	High risk; monitor closely

Meta’s 3-Tier Data Restriction System (November 2025)

Tier	Restriction Level	Impact	Likely Classification
Tier 1	Standard restrictions	Limited custom audiences from health data	General wellness brands
Tier 2	Enhanced restrictions	No optimization for purchases/leads via pixel; limited retargeting	Telehealth, peptide therapy
Tier 3	Maximum restrictions	Severely limited targeting; no health-related custom audiences	Prescription drugs, sensitive conditions

Meta Advertising Policy Rules for Peptide/Telehealth Brands

Prescription Drug Advertising: Promoting prescription drugs is NOT allowed without Meta authorization. Eligibility is limited to online pharmacies, telehealth providers, and pharmaceutical manufacturers. Must apply for and receive special authorization. Age-gating is required.

Supplement Advertising: Dietary supplements can be advertised to 18+ without special authorization. Cannot imply negative self-perception, declare a “perfect body type,” or use before/after comparisons for weight loss. No close-ups on specific body areas.

Age-Gating Impact Analysis

Positioning	Age-Gate Required?	Reach Impact	Pixel Optimization
Supplement (Aluna)	No	Maximum reach	Tier 1-2 restrictions
Telehealth/Rx (Noho Labs)	Yes	Significantly reduced	Tier 2-3 restrictions

This is the single most important strategic consideration for your dual-brand approach. Aluna as a supplement brand avoids age-gating entirely, allowing maximum reach and better pixel optimization.

Compliance Checklist (Pre-Launch)

1. Confirm product/service is legally available in target states
2. Verify peptide is Category 1 or supplement

3. Apply for Meta prescription drug advertising authorization (Noho Labs)
4. Set up age-gating for Rx-related ads
5. Review all copy for prohibited health claims
6. Ensure “supports” / “helps maintain” language throughout
7. Set up Conversions API (server-side tracking) for Tier 2 restrictions
8. Use intermediary domain if needed to avoid health-category pixel restrictions
9. Document compliance review process for audit trail

9. Influencer & Partnership Ecosystem

Influencer whitelisting — running ads through a creator’s page rather than the brand page — is the dominant acquisition strategy in this space. The ad appears as if the influencer posted it organically, dramatically increasing trust and click-through rates.

Confirmed Influencer Partnerships (Observed from Meta Ad Library)

Rho Nutrition’s Network:

Influencer	Category	Est. Following	Role
Dr. Mark Hyman	Functional Medicine MD	5M+	Brand Partner, Advisor
Laird Hamilton	Pro Athlete (Surfing)	1M+	Brand Ambassador
Michael Chernow	Celebrity Chef/Entrepreneur	500K+	Sponsored Content
Mind Pump	Fitness Podcast	2M+	Whitelisted Partner
Lauren Fisher	CrossFit Athlete	800K+	Brand Ambassador
Eric Hinman	Wellness Influencer	200K+	Sponsored Content
Dr. Jeremy London, MD	Physician/Content Creator	100K+	Medical Authority
Dr. Francesca LeBlanc	Physician	50K+	Medical Authority

Cymbiotika’s Network:

Influencer	Category	Est. Following	Role
Gary Brecka	Human Biologist/Biohacker	3M+	Primary Spokesperson
Remi Cruz	Lifestyle/Beauty	3M+ YouTube	Retail Partnership
joyjah	Wellness Creator	500K+	UGC Testimonial

Target Influencer Tiers for Noho Labs / Aluna

Tier 1: High-Authority Medical/Science Voices (10K – 200K per partnership)

Name	Platform	Following	Relevance	Status
Dr. Andrew Huberman	YouTube/Podcast	6M+	Neuroscience, protocols	Available
Dr. Peter Attia	Podcast/YouTube	3M+	Longevity medicine	Available
Dr. Rhonda Patrick	YouTube/Podcast	3M+	Nutrition science	Available
Dave Asprey	Multi-platform	2M+	Father of biohacking	Available
Ben Greenfield	Podcast/YouTube	1.5M+	Biohacking, fitness	Available
Dr. Casey Means	Multi-platform	500K+	Metabolic health	Available
Thomas DeLauer	YouTube	3M+	Keto/fasting/supplements	Available
Dr. Gabrielle Lyon	Multi-platform	500K+	Muscle-centric medicine	Available

Tier 2: Fitness/Performance Athletes (5K – 30K per partnership)

CrossFit Games athletes, UFC/MMA fighters, endurance athletes, natural bodybuilders, and professional surfers. Ideal for recovery and performance messaging.

Tier 3: Wellness/Lifestyle Creators (2K – 15K per partnership)

Biohacking micro-influencers, functional medicine practitioners, wellness podcasters, health-focused tech founders, and women’s health creators.

Tier 4: UGC Creators (500–2K per video)

Paid creators who produce ad content without needing a large following. Used strictly for creative production volume.

“Locked” vs. “Available” High-Value Targets

Status	Influencer	Current Partner
Locked	Dr. Mark Hyman	Rho Nutrition
Locked	Gary Brecka	Cymbiotika
Locked	Laird Hamilton	Rho Nutrition
Locked	Lauren Fisher	Rho Nutrition
Locked	Mind Pump	Rho Nutrition
Available	Dr. Andrew Huberman	None observed
Available	Dr. Peter Attia	None observed
Available	Ben Greenfield	None observed
Available	Dr. Casey Means	None observed
Available	Thomas DeLauer	None observed

Recommended Whitelisting Strategy

Allocate 60% of total ad spend through influencer/whitelisted pages and 40% through brand pages (Noho Labs / Aluna). Start with 3-5 influencer partners and scale to 10+. Run 5-10 ad variations per influencer page, mixing video UGC with static testimonial quotes. Rotate creative every 4-6 weeks to prevent fatigue.

Partnership Economics

Model	Structure	Best For	Upfront Cost
Flat Fee + Whitelisting	Pay 5K – 50K for content + 90-day rights	Tier 1-2 influencers	High
Affiliate/Revenue Share	10-20% commission on attributed sales	Tier 3-4, testing	Low
Equity/Advisory	Equity stake + long-term ambassador	Tier 1 who genuinely use product	Varies
UGC-Only	500 – 2K per video, brand owns rights	Scaling creative volume	Low

Phased Influencer Rollout

Phase 1 (Months 1-3): Sign 3-5 UGC creators + 1-2 physicians. Budget: 10K – 25K. **Phase 2 (Months 3-6):** Add 2-3 Tier 2 athletes + 2-3 Tier 3 wellness creators. Launch affiliate program. Budget: 25K – 75K. **Phase 3 (Months 6-12):** Pursue 1 Tier 1 partnership. Scale to 10+ active whitelisting partners. Budget: 75K – 200K.

10. Strategic Opportunity Matrix & SWOT

SWOT Analysis

	Positive	Negative
Internal	Strengths: Clean slate (no policy violations), dual-brand architecture, market timing, professional brand aesthetic	Weaknesses: No existing pixel data, high-friction Rx category, compliance burden, budget requirements vs. incumbents
External	Opportunities: Under-advertised sermorelin/BPC-157, protocol-based selling, influencer whitelisting playbook, GLP-1 off-ramping market	Threats: FDA enforcement shifts, Meta policy tightening, incumbent CPM inflation, supply chain bottlenecks

Brand Positioning Strategy

Aluna Science — “Cellular Longevity Essentials”

The goal is maximum reach, lowest friction, and highest volume. Position as a premium supplement brand competing directly with Rho Nutrition and Cymbiotika. Hero products should include Liposomal NAD+, Liposomal Glutathione, and protocol bundles. No age-gating required. Heavy influencer whitelisting. Bundle-first pricing strategy.

Noho Labs — “Your Concierge Peptide Protocol”

The goal is highest authority, highest LTV, and premium patient experience. Position as a physician-supervised telehealth platform competing with AgelessRx and local wellness clinics. Hero products should include Sermorelin, Injectable NAD+, and specialized peptide stacks. Age-gated ads required. Physician-led content. Lead generation → consultation funnel.

The Cross-Sell Flywheel

The strategic advantage of your dual-brand architecture is the ability to acquire customers cheaply through Aluna (low-friction supplements, 30–80 CAC) and then cross-sell them into Noho Labs (high-LTV prescriptions, 1,000–3,000 LTV) once trust is established. This creates a customer acquisition flywheel that competitors with only one brand cannot replicate.

11. 90-Day Launch Roadmap

Month 1: Infrastructure & Compliance Foundation

Week 1-2: Technical Setup

- Implement Conversions API (CAPI) for both noholabs.com and alunascience.com (critical for navigating Meta's Tier 2 restrictions)
- Set up intermediary landing pages (advertorials) to buffer main domains from health-category pixel restrictions
- Configure Meta Business Manager, Ad Accounts, and apply for Pharmacy/Telehealth authorization for Noho Labs
- Install Meta Pixel with proper event tracking (ViewContent, AddToCart, Purchase for Aluna; Lead, CompleteRegistration for Noho Labs)

Week 2-3: Creative Production (Batch 1)

- Source 5 UGC creators to film 20 “Hook + Problem + Solution” videos for Aluna (NAD+/Glutathione focus)

- Film 5 physician-led educational videos for Noho Labs (Sermorelin/Recovery focus)
- Design 10 static bundle/product shots with strong social proof elements
- Create 5 carousel ads showcasing product collections and stacks

Week 3-4: Funnel Optimization

- Implement “Bundle First” UI on Aluna product pages (bundles displayed before individual products)
- Build seamless Quiz → Consult flow for Noho Labs
- Set up automated email/SMS abandon cart sequences
- Configure subscription upsell flows post-purchase

Month 2: The “Sandbox” Testing Phase

Aluna Campaign Launch:

- Budget: 100–150/day
- Campaign Structure: 1 Broad Audience Campaign (Advantage+ Shopping) + 1 Retargeting Campaign
- Testing: 5 different hooks per product; kill any ad with <1% outbound CTR after \$50 spend
- Goal: Identify 1-2 winning creative formats and establish baseline CPA

Noho Labs Campaign Launch:

- Budget: 50–100/day
- Campaign Structure: Lead Generation (In-platform or Landing Page)
- Testing: Educational vs. Symptom-focused messaging
- Goal: Establish Cost Per Consult and Consult-to-Rx conversion rate

Influencer Outreach:

- Contact 15-20 Tier $\frac{3}{4}$ influencers for UGC and potential whitelisting
- Secure 3 initial whitelisting partners
- Begin producing whitelisted creative

Month 3: Scaling & Whitelisting Integration

Scale the Winners:

- Increase budget by 20% every 3 days on winning Aluna creatives
- Shift 60% of Aluna budget to Influencer Whitelisting campaigns
- Introduce “Stack/Protocol” messaging based on winning individual products

Refine the Funnel:

- Implement A/B testing on Noho Labs quiz (length vs. intent)
- Launch “Retargeting with Authority” (showing physician videos to people who abandoned cart)
- Introduce subscription upsells post-purchase

Day 90 Target Metrics:

- Aluna: Blended CAC < 80, *AOV* >120
- Noho Labs: Cost Per Consult < \$150, Rx Conversion > 60%
- Overall: 3 active whitelisting partners driving 30%+ of revenue

12. Budget Allocation Model

Scenario A: \$50K Launch Budget

Category	Allocation	Amount	Purpose
Aluna Media Spend	40%	\$20,000	Immediate e-commerce conversions
Noho Labs Media Spend	20%	\$10,000	Lead generation / consults
Creative Production	20%	\$10,000	UGC creators, video editing, static design
Influencer Fees	10%	\$5,000	Flat fees for whitelisting rights (Tier ³ / ₄)
Tech/Infrastructure	10%	\$5,000	CAPI setup, landing page software, tracking

Scenario B: \$100K Launch Budget

Category	Allocation	Amount	Purpose
Aluna Media Spend	35%	\$35,000	Scaled e-commerce testing
Noho Labs Media Spend	20%	\$20,000	Lead generation at scale
Creative Production	20%	\$20,000	Higher volume, better talent
Influencer Fees	15%	\$15,000	1 Tier 2 + multiple Tier ³ / ₄ partners
Tech/Infrastructure	10%	\$10,000	Advanced tracking, landing page optimization

Scenario C: \$250K Launch Budget (Aggressive)

Category	Allocation	Amount	Purpose
Aluna Media Spend	30%	\$75,000	Full-scale Advantage+ campaigns
Noho Labs Media Spend	20%	\$50,000	Multi-state lead generation
Creative Production	15%	\$37,500	Professional production + UGC at scale
Influencer Fees	25%	\$62,500	1 Tier 1 + multiple Tier ² / ₃ partners
Tech/Infrastructure	10%	\$25,000	Full-stack optimization

Why Creative Gets 20%

Creative is the single biggest variable in Meta Ads success in 2026. Underfunding creative to overfund media spend is the most common mistake new advertisers make. Meta’s algorithm can find your audience — but only if you give it compelling creative to show them. You need a constant pipeline of new hooks to beat ad fatigue, which sets in after 4-6 weeks on any given creative.

Appendix A: Key Metrics to Track

Metric	Definition	Target (Aluna)	Target (Noho Labs)
Blended CAC	Total spend ÷ total new customers	< \$80	< \$250
MER	Total revenue ÷ total marketing spend	> 3.0x	> 2.5x
AOV	Average order value	> \$120	> \$300
LTV:CAC Ratio	Lifetime value ÷ acquisition cost	> 4:1	> 6:1
Outbound CTR	Link clicks ÷ impressions	> 1.5%	> 1.0%
Hook Rate	3-second video views ÷ impressions	> 30%	> 25%
Hold Rate	ThruPlays ÷ 3-second views	> 20%	> 15%
Subscription Rate	Subscribers ÷ total purchasers	> 35%	> 60%

Appendix B: Immediate Next Steps

1. **Implement CAPI** on both domains (this is non-negotiable for health brands on Meta in 2026)
2. **Apply for Meta Pharmacy/Telehealth authorization** for the Noho Labs ad account
3. **Source 5 UGC creators** through platforms like Billo, Insense, or direct outreach
4. **Build the Aluna bundle page** with review counts, savings callouts, and subscription option
5. **Begin influencer outreach** to 15-20 Tier ³/₄ creators in the biohacking/wellness space
6. **Set up the Noho Labs symptom quiz** as the primary landing page for all telehealth ads
7. **Create a compliance review checklist** and review all ad copy before submission

This report was compiled using data from Meta Ad Library, Similarweb, Google Trends, Reddit community analysis, competitor website teardowns, FDA regulatory databases, and industry research reports. All data is current as of June 16, 2026.
